ICE Breaker

Prompt 1: AI given what you know of me what are the tools I would need if I were an agent to accomplish my daily tasks.

Prompt 2: Draw an image of my tools in action!

Does this match your weakness, or is it off base?

Case Study

Helpdesk Copilot What's Wrong

Copilot Help Desk Workflow

Where the Issue is!

Copilot Help Desk Workflow

From lab 10

Most likely came with
the software update!

From lab 9

Welcome to the n8n Lab

- ✓ **Visual Workflow Building**
Design, test, and orchestrate node-based automations interactively using the n8n lab
- ✓ **Save and Resume**
Your workflows are saved and can be resumed or iterated on later
- ✓ **Export**
Export workflows for deployment or future reuse

The image shows a detailed view of the "AI Agent" node configuration. The "Parameters" tab is selected, showing options like "Enable Fallback Model" (a toggle switch) and "Options" (a list of properties). The "Settings" tab is also visible. A blue arrow points from the "AI Agent" node in the workflow diagram to the "AI Agent" node in this configuration panel. Another blue arrow points from the "Add Option" button to the "System Message" option in the list.

Shopease Step-by-Step

You are an input pre-processor for a customer analytics system.

When you receive a user message, do the following:

1. Identify the intent: is it a WHO question (customer profile), a WHAT question (payment/transaction), a WHAT TO DO question (retention), or a COMBINED question?
2. Rewrite the query in a clear, specific, analytics-friendly format
3. If the query is too vague (e.g. "tell me something interesting"), expand it into a specific analytics question
4. Return **ONLY** the cleaned, rewritten query — nothing else

Example:

Input: "who is about to leave us?"

Output: "Identify all customers with High churn risk, their loyalty tier, last purchase date, and total spend"

Shopease Step-by-Step

You are an input pre-processor for a customer analytics system.

When you receive a user message, do the following:

1. Identify the intent: is it a WHO question (customer profile), a WHAT question (payment/transaction), a WHAT TO DO question (retention), or a COMBINED question?
2. Rewrite the query in a clear, specific, analytics-friendly format
3. If the query is too vague (e.g. "tell me something interesting"), expand it into a specific analytics question

Chat Session: e9

The screenshot shows the configuration interface for the 'AI Agent' node. The 'Parameters' tab is active, displaying settings for the 'AI Agent'. A blue arrow points from the 'Orchestrator Agent' node in the workflow diagram to the 'AI Agent' node in the configuration panel. Another blue arrow points from the 'Add Option' button to the 'System Message' option in the list. The 'System Message' option is highlighted, indicating it is the selected configuration for the orchestrator agent.

Shopease Step-by-Step

System Message

You are the Orchestrator Agent for the Shopease Customer Intelligence Hub.
Your job is to:

1. Understand the user's question or request.
2. Decide which specialist agent(s) should handle it:
 - Customer Profile Agent: questions about WHO customers are — churn risk, segments, demographics, loyalty tiers, lifetime value, behavioral patterns.
 - Payment & Transaction Agent: questions about WHAT happened transactionally — payment methods, failures, revenue, average order values, spend trends.
 - Retention & Recommendation Agent: questions about WHAT TO DO — win-back strategies, offers, loyalty upgrades, re-engagement campaigns, channel suggestions.
3. Route the request to the correct specialist tool(s).
4. Receive the specialist's output and synthesize a clean, clear, decision-friendly final response for the user.

Rules:

- Never analyze data yourself — always delegate to the right specialist.
- If a question spans multiple specialists (e.g., 'give me a full retention report'), call all relevant specialists and merge their outputs into one coherent response.
- Keep final responses structured, concise, and insight-driven.
- Maintain conversation context across turns using memory.

Latest Pushover News: API usage limit changes coming May 1st

"I love Pushover. It's completely customizable and has the ability to superpower my notifications." -- Pushover Android User Review

Pushover

Simple Notifications

Pushover makes it easy to get real-time notifications on your Android, iPhone, iPad, and Desktop (Android Wear and Apple Watch, too!)

GET IT ON
Google PlayDownload on the
App Store

The screenshot shows the Pushover website. At the top is a dark navigation bar with the Pushover logo and links for Android, iPhone & iPad, Desktop, Integrations, Pricing, Teams, API, Blog, Help, and Login or Signup. Below the navigation bar is a dark banner with the text "Latest Pushover News: API usage limit changes coming May 1st". The main content area has a light background. On the left, the Pushover logo is displayed in a large, blue, stylized font, followed by the text "Simple Notifications". Below this, a paragraph states: "Pushover makes it easy to get real-time notifications on your Android, iPhone, iPad, and Desktop (Android Wear and Apple Watch, too!)". At the bottom left are two buttons: "GET IT ON Google Play" and "Download on the App Store". On the right side of the main content area, there is a collage of images showing the Pushover app interface on a desktop browser, an Android phone, and an iPhone. The desktop browser shows a list of notifications including "All Messages", "Adium", "E-mail Gateway", and "eBay Price Watch". The Android phone shows a notification for "IFTTT: Weather" with the text "It's currently Cloudy and 71F outside". The iPhone shows a notification for "Domoticz: Washing" with the text "44 minutes".

Create an account and you will see an API key!

You will need two tokens.
